

Natural Disasters Across Australia
 where DREF disaster activations have been concentrated since 2006, and
 which communities are more exposed after accounting for population

Section 1 - the national picture (where disaster impacts are most concentrated)

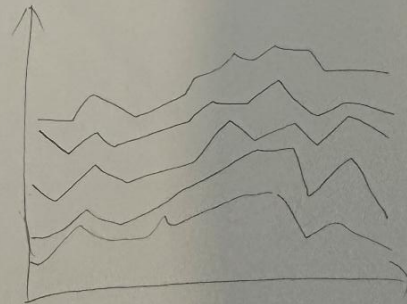

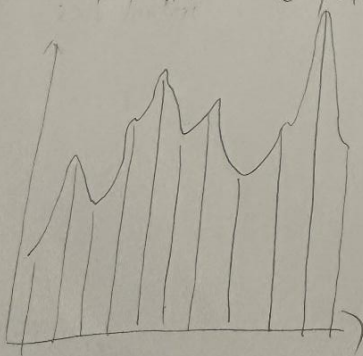

total activations LGAC affected most common hazard type

Section 2 - what kinds of hazards dominate (Different places face different hazard profiles)

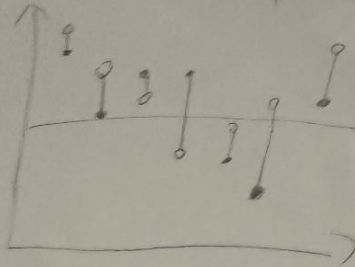

Section 3 - how the pattern changes over time

Change of activations during 2006-latest

Time changes of flood/bushfire/cyclone

Section 4 - Which communities are most exposed
 (Exposure looks different once population is taken into account)

Compare raw count and
 per-capita count

Top 10 LGAs by activations per 10

Conclusion:
